[redacted] TO CONVAIR TRUX 20 July 1956
THRU: WDY

SUBJECT: 117L Management

1. It is suggested that a WDD position with regard to the system management of the 117L be evaluated as soon as possible. This management position, should encompass the general feature which were previously discussed with the Project Group and the Science Advisory Committee.

2. In addition to the over-all WDD/AEDC/AED management philosophy, we should determine exactly the type of control and liaison which Lockheed Aircraft Corporation will be required to function.

3. Request that this be prepared in draft form at the present time and that prior to initiation of this draft, I should like to have a discussion with those concerned with the development of this management philosophy.
